A software company with a trading desk, or a trading company with engineers

Either description is right. Granmesh was formed in Doha in 2026 by two partners with a background in building business systems and supplying the equipment they run on.

Why two disciplines

The founders spent years delivering ERP, portals and operational systems for companies in the Gulf. The same problem kept appearing: the software was ready, but the hardware was late, wrongly specified, or bought from a supplier who did not understand what the system needed. Projects slipped, and nobody was accountable for the whole.

Granmesh exists to close that gap. The software division designs and builds the systems. The trading division sources the equipment, parts and machinery, whether it is the network the system runs on, the devices that feed it data, or the machine tools and industrial equipment the client's business depends on.

Clients can use either division on its own. The value shows when they use both: one contract, one team, and one party responsible for the result.

HOW WE WORK

Four principles that shape every engagement.

Say what we will do, then do it

Scope, price and dates are written down before work starts, and changes are agreed in writing.

Senior people on the work

The people in the first meeting are the people who deliver. We stay small by choice.

Arabic and English, equally

Every system, document and conversation works in both languages from the start.

Ownership stays with the client

Source code, data, cloud accounts and equipment warranties are in the client's name.

Software systems for business, and wholesale supply of electronic, telecommunications and industrial equipment, from Doha.

01 · SOFTWARE DIVISION

Build the system your business actually needs

ERP, portals, mobile apps and integrations, designed around how you work rather than how a vendor's product works.

Custom ERP and business systems

Web and mobile applications

Integration, cloud and ongoing support

02 · TRADING DIVISION

Source the equipment, parts and tools you rely on

Wholesale supply of electronic and telecommunications equipment, CNC and computer-controlled machine tools, and industrial machinery, delivered to Qatar.

Electronic and telecom equipment and parts

Computer-controlled machine tools

Industrial machinery and equipment

SECTORS WE WORK IN

The patterns repeat: documents, approvals, money, stock and people. The details are what we get right.

Trading and distribution

Contracting and engineering

Facilities and fleet

Professional services

Healthcare and clinics

Retail and hospitality

Government and semi-government

Education

WHAT YOU CAN EXPECT

Trading is a relationship business. These are the commitments we hold ourselves to.

- Genuine, traceable goods
- Clear quotations
- Logistics handled
- Support after delivery

Software built around your business, not the other way round

We design, build and run the systems companies use every day: ERP and finance, procurement and inventory, customer portals, mobile apps for field staff, and the integrations that tie them together.

SERVICE LINES

Custom Software Development

Systems designed from your process, owned by you.

When an off-the-shelf product forces your business to bend, we build the one that fits.

ERP and Business Systems

Finance, procurement, inventory, sales and HR in one system.

Quotation to invoice to ledger, with stock, purchasing and payroll on the same database.

Web and Mobile Applications

Customer portals, staff apps and public-facing products.

The screens your customers and field staff actually use, on web, iOS and Android.

Systems Integration and APIs

Make the systems you already have talk to each other.

ERP to e-commerce, payroll to bank, devices to dashboard, without re-keying.

Cloud and DevOps

Hosting, deployment and operations done properly.

Secure, monitored, backed up, and deployed without downtime.

Support and Managed Services

A named engineer, a response commitment, a roadmap.

Systems need looking after. We take that on, with clear service levels.

How a project runs

A short, predictable path from the first meeting to a system in daily use.

01

Discover

We map the current process with the people who run it, and agree what the system must change.

02

Design

Screens, data model and integrations are designed and reviewed with you before anything is built.

03

Build

Delivered in short increments you can see and test, with real data as early as possible.

04

Launch

Migration, training and a controlled go-live, with the old system kept available until you are confident.

05

Support

A named engineer, a response commitment, and a roadmap of improvements after launch.

Technology we rely on

Mainstream, well-supported tools that a client can hire for and host anywhere.

TypeScript and Node.js

React and Next.js

Flutter for mobile

PostgreSQL

REST and GraphQL APIs

Docker and Linux

AWS and on-premise

Arabic and RTL first

Have a system in mind?

Send us a short description of what you need and we will come back with questions, not a brochure.

+974 6621 2702 · info@granmesh.com

WHAT YOU GET

- A system that matches the process instead of changing it
- One record for every transaction from quote to ledger
- Customers served without a phone call
- Data entered once and used everywhere
- Deployments that take minutes and roll back cleanly
- Issues answered by someone who knows the system

Equipment, parts and machinery, sourced and delivered to Qatar

Granmesh supplies businesses and projects in Qatar with electronic and telecommunications equipment, computer-controlled machine tools and industrial machinery. We source from manufacturers and authorised distributors, handle shipping and customs, and support what we sell.

TRADING LINES

Electronic and Telecommunications Equipment

Network, telecom and electronic equipment, components and spare parts.

- Network switches, routers, firewalls and access points
- Telecommunications and wireless infrastructure
- Servers, storage and data-centre hardware
- Structured cabling, fibre and connectivity
- Electronic components: semiconductors, integrated circuits, boards and modules
- Power, UPS and surge protection for electronic systems

Computer-Controlled Machine Tools

CNC and computer-controlled machines, controllers and tooling.

- CNC milling, turning and machining centres
- CNC laser, plasma and waterjet cutting systems
- CNC routers for wood, aluminium, stone and composites
- Controllers, drives, motors and spindles
- Cutting tools, holders, fixtures and workholding
- CAD/CAM software and machine connectivity

Industrial Machinery and Equipment

Other machinery and equipment for industry, facilities and projects.

- Production and packaging machinery
- Compressors, pumps and fluid handling
- Material handling and lifting equipment
- Workshop and garage equipment
- Generators, power distribution and electrical panels
- HVAC and facilities plant

How sourcing works

A clear path from enquiry to delivery, with you informed at each step.

01

Enquiry

You send specifications, part numbers, a bill of materials or simply the requirement. We confirm what we understood.

02

Quotation

A priced, itemised quotation with lead times, origin and delivery terms, usually within days.

03

Sourcing

Goods procured from manufacturers or authorised distributors, with documentation and compliance checks.

04

Delivery

Shipping, customs clearance and delivery to your site in Qatar, with tracking throughout.

05

After-sales

Warranty handling, spares, and installation or commissioning support where needed.

WHAT YOU CAN EXPECT

Genuine, traceable goods

Sourced from manufacturers and authorised channels, with certificates of origin and conformity where applicable.

Clear quotations

Itemised pricing, stated lead times and delivery terms. No surprises at invoicing.

Logistics handled

Shipping, customs clearance and last-mile delivery in Qatar arranged by us.

Support after delivery

Warranty claims, spares and technical questions handled by the same team that sold the goods.

Have a list to price?

Send part numbers, specifications or a drawing. We will confirm availability and return an itemised quotation.

Leadership

Two managing partners with full authority over the company.

Ibrahim Abbas Farah Mohamed
MANAGING PARTNER

Leads the software division: systems architecture, product design and delivery of ERP, portals and mobile applications.

Mohammed Khaled Eljack Omran
MANAGING PARTNER

Leads the trading division: sourcing, supplier relationships, logistics and client accounts in Qatar.
